

Computer Forensics Examiner – San Francisco/ Los Angeles, CA

About SafirRosetti

SafirRosetti is a nation-wide corporate investigations and security consulting firm with a client base including major law firms, Fortune 500 companies, and government/ state agencies. SafirRosetti is part of Global Options, Inc., a publicly traded risk assessment company headquartered in Washington DC. Our work includes hyper-sensitive theft of trade secrets cases, employee disputes, and well-publicized legal cases. Our high-tech clients frequently use their own proprietary computer and software systems, making each case unique and challenging. We pride ourselves in having been involved in several important criminal prosecutions for theft of trade secrets and producing winning cases for our law firm clients in civil matters.

Many of our computer forensic cases are significant in their own right. However, SafirRosetti is unique in also having a strong non-forensic traditional investigative practice. In many of our forensic cases, we work with other SafirRosetti/ Global Options offices to apply evidence gained by surveillance, international research, forensic accounting, and confidential sources to our computer investigations. For the last six years, our computer forensics work has been an integral component to these cases.

SafirRosetti's computer forensics practice is centered in our San Francisco computer lab, with forensic operatives working in our New York and Dallas offices. We are seeking a computer forensics examiner to be part of our team based in San Francisco, and assist us with our continuing rapid growth on the West Coast. The position may involve significant case work and travel in Southern California, working closely with SafirRosetti's Los Angeles office.

Responsibilities

- Attend on-site at client locations to collect data and advise, including business travel
- Conduct detailed computer forensic analysis with the potential for expert testimony
- Affidavit, deposition, and report writing
- Extensive client contact as part of a SafirRosetti investigative team
- Assist in marketing with established West Coast clients, including some business travel

Technical Qualifications – Minimum

- Strong "hands on" computer hardware experience with desktops/ laptops (including Macs), servers, networks, PDAs/ cellphones

- Knowledge of Windows OS (NT, 2000, XP, Vista, Server 2000, Server 2003) and Exchange/ Outlook email
- Proficient in Encase, FTK, Paraben, Helix and other third party forensic tools
- Experience in cloner hardware (e.g. Logicube hard drive cloners) and logical acquisition tools (e.g. Robocopy, etc.)
- At least 1 year of computer forensics experience in an investigative capacity
- Full understanding of proper data collection techniques, chain of custody, documentation and Federal Search and Seizure Guidelines
- Excellent communication skills – in particular the ability to explain technical issues to clients, lawyers and juries in simple terms

Technical Qualifications – Strong Plus

- Understanding of network architecture and flow
- Knowledge of MAC OS and Apple music devices
- Linux/ Unix experience
- Experience with multiple email systems including Lotus Notes, Sendmail, Eudora, Mozilla, Thunderbird, etc.
- EnCE, CFCE or equivalent certification
- Working with State or Federal Law Enforcement
- Experience working with lawyers or carrying out forensic analysis as part of litigation, including being named as an expert in litigation, with resulting preparation of affidavits and declarations

Compensation is commensurate with experience. To apply for this position, please send an email with resume attached to rburge@safirrosetti.com.
